

raw engineering is a software technology company specializing in mobile app and web application development in the cloud. Since 2007, raw engineering has helped Fortune 500 and startups alike deliver apps and websites, which today have millions of users and tens of millions of monthly visits. Core development expertise includes iOS, Android, HTML5, JavaScript, Node.js, PHP, Ruby on Rails, .NET, and related technologies.

leadership

raw engineering's leadership team has deep understanding of enterprise needs with a combined 45+ years of experience working with Fortune 500 companies.

Neha Sampat, CEO

15 years in product marketing for enterprise software, cloud computing and online experiences for Sun Microsystems and VMware. Co-founded KurbKarma, a TechCrunch Disrupt 2012 Startup Battlefield Finalist.

Nishant Patel, CTO

15 years of experience solving complex technology and cloud integration problems for large enterprises. Prior to founding raw engineering, Nishant was Senior Architect at TIBCO Software.

Matthew Baier, COO

15 years of experience launching and growing successful product lines at Sun Microsystems, Oracle and Salesforce. Co-founded KurbKarma, a TechCrunch Disrupt 2012 Startup Battlefield Finalist.

raw engineering products

built.io is raw engineering's award-winning mobile and web application development platform. By providing built-in enterprise app functionality, such as mobile notifications, geolocation, analytics, social integration and content management, built.io enables developers to deliver powerful apps in record time. built.io powers the entire application backend servers, cloud infrastructure, database and has been proven to deliver worry-free scaling and reliable availability to Fortune 500 companies and startups alike.

contentstack.io is raw engineering's mobile-first content management system (CMS) for the enterprise. Built on top of the award-winning platform built.io, contentstack.io comes with mobile enablement built-in – rather than bolted on – and accelerates content delivery across both web and mobile content channels. Business users are empowered to manage the content they are responsible for. Web developers can separately manage related code using the skills they already have and tools they are familiar with.

raw engineering solutions

built.io Conference App

The built.io Conference App is designed for enterprise conferences and marquee events. Cutting edge technology enhances the digital and mobile experience for attendees and provides unprecedented value to conference organizers. Running on VMware's hybrid cloud infrastructure vCloud® Air™, reliability, security, and scale are guaranteed. With innovative features such as live heat maps, beacon support, in-app concierge services, and post-event ROI reports, the built.io Conference App is both practical and highly engaging.
